

Product Name	Description	Packaging	Product Code
UNIPOL 15	Marble Polish for Floor	5 kg	1030018

Properties:

- UNIPOL 15 is a marble polishing agent.
- Crystallizing upper layer of the floor coating, forms a very resistant and high gloss surface on the marble.
- Reacts swiftly during application.
- Begins giving a very good gloss effect from the second time application.
- Does not cause any change in the original color of the marble.

Directions for Use:

- Floor preparation: The floor to be polished has to be cleaned from dirt or polish residue remaining from previous applications. Polish removing products (UNIPOL 30 in UNICHEM Portfolio) also have strong cleaning property, so must be preferred for this preparation process. This process can also be carried out by a rotary machine with a preferably black pad on. Rinsing must be done throughout and properly so that no detergent or dirt residue remains on the floor, thus maximum polishing performance can be obtained.
- The container of UNIPOL 15 must be shaken firmly before use.
- Application is carried out by means of a rotary polishing machine with a steel alloy polishing pad on. UNIPOL 15 is used by spraying directly onto the floor to be polished, not more than a 2 m² of area each time. The machine is then moved slowly on the floor with circular movements for 1 – 2 minutes.
- Application is repeated two times at minimum depending on the hardness degree of marble (low hardness means more times application), until reaching to high gloss effect.

pH Value: 0.5 – 1.0.

Safety Tips:

- Keep out of the reach of children.
- Avoid contact with eyes or skin.
- In case of contact with eyes or skin, rinse immediately with plenty of water and seek medical advice.
- Wear suitable gloves during application.
- Keep the container tightly closed.
- Do not mix with any other chemicals.
- Store in a cool and dry place.

Packaging:

- 5 kg of plastic container; 4 in a cartoon box.
